MUSKINGUM COUNTY FIREMEN'S ASSOCIATION

RADIO/DISPATCHING GUIDELINES

A committee from the Muskingum County Firemen's Association was appointed to look into radio traffic / Dispatching by President Hartman. The committee has met several times along with Dispatch Supervisor Kim Hambel and received input from the Dispatchers at Muskingum Fire Control. The group has agreed on the following revised guidelines for all Fire & EMS Departments in Muskingum County. All departments need to review these guidelines with their department so all members have a clear understanding of the guidelines.

1. All Emergency calls will be answered by M.F.C. (Muskingum Fire Control) through 9-1-1 or the county 7 digit emergency number. If you receive a direct on station call you should notify M.F.C. of the call. They will create a call in C.A.D. (computer aided dispatch) and keep times.
2. M.F.C. will alert the appropriate agency by giving a voice message, tones, and the message repeated with the type of run, including name of residence. A 4 minute time is started now.
3. The department needs to acknowledge traffic from M.F.C. informing them they are clear and responding, (meaning a vehicle is physically responding) or clear and responding shortly. "In some cases the Chief or another officer may go direct to the scene and handle the situation or request". If M.F.C. hears no response in 4 minutes, the department is again toned out. If there is no response in 2 additional minutes, M.F.C. is to start the next nearest mutual aid department. When the original department responds, mutual aid can be canceled by the original department. M.C.F. will not keep toning for people. If they have not responded by now they are not going to. C.A.S. will be sent for EMS coverage if your department boundaries touch the city or there is no other department available.
4. M.F.C. needs to know when a vehicle is responding, (meaning physically responding). If they do not hear units responding after a reasonable time following the base taking directions; they will inquire if you are responding. If M.F.C. receives no answer, they are to dispatch mutual aid. It is important that departments do not respond by stating they are or will be responding and then allow many minutes to pass before telling M.F.C. they cannot respond. If you are unsure if you will get a crew, request mutual aid, it can always be canceled.
5. Use common language when communicating to each other. The use of Code 16 & code 99 could be the only exception to this. Say what you mean and do not use codes.
6. M.F.C. needs to hear that you are responding and on the scene. Squads and each truck should mark responding, on scene, en-route to hospital, and back in service. Multiple units do not need to report back in service if they are all back in service at the same time. One unit can call in for all. M.F.C. does not need to know units are back on their station. Please remember that all departments in our county and a neighboring county share a common radio dispatch frequency. Please keep remarks short and in common language, clear, and professional. Please share the radio, especially if another department is being dispatched. Their traffic may be far more important than yours.
7. M.F.C. will assist in calling the needed utility and other support agencies. They have a direct line to do so. Use the closes address for a location. The utilities like the address better than the pole number.
8. Departments with high band and MARCS radios are encouraged to use these radios to communicate directly with the paid services, hospitals, Zanesville Fire etc.
9. Medical Helicopter guidelines. When setting up a L.Z. (landing zone) give M.F.C. the address or closes cross street or intersection and they can obtain the Lat. - Long. For the helicopter with their mapping software. There is no need to give them the Lat. Long over the radio unless you have no other way of telling them where you are. V-TAC-4 Frequency is to be used as the main channel with Hospital 155.220 103.5 as a backup or MARCS Med-fight.

10. When a department marks on the scene of an injury accident M.C.F. will advise which Law Enforcement is handling and the E.T.A. when it is available. A department may request law enforcement's E.T.A. if they are not on the scene in a reasonable time. 11. Wreckers are to be requested by the departments only when it is a quick clear incident, rescue or possibly a time delay for the department to the scene. The Patrol and S.O. need to follow a rotation set up by the county wrecker companies' request.

12. The O.I.C. should be the person to request mutual aid. The request should be made directly to M.F.C. for in county and to other out of county dispatch centers when applicable to save time and radio traffic.

13. Departments need to utilize one of the 4 V-TAC frequencies as much as possible. The dispatcher has the authority to tell a department to go to a V-TAC if needed. All departments are to use the 4 V-TAC frequencies or their high band for runs and every day events. Dispatch also should tell a department to go to a V-TAC frequency if there is other traffic. Departments should do everything in their power **not** to talk on the cross patch systems. These have and do cause many problems due to them talking on a 100 watt or more radio. This is why the V-TAC frequencies were set up. Most departments also have mobile repeaters in their vehicles that could be used instead of the cross patch systems.

14. If you need dispatch times, etc., please call 452-3637 ext. 6148. Do not tie up the radio.

15. If there is some type of problem during the run the dispatcher will contact their Supervisor who will in turn contact the Department chief or officer in charge of the run after the incident is over and advise them of the problem. The chief or officer in charge should handle the problem. Only the Fire or E.M.S. chief should communicate with the Dispatch Supervisor to discuss problems with dispatch. **DO NOT CALL THE DISPATCHER!**

16. The use of the M.A.R.C.S. radio system is to be used for County or State wide emergencies. The U.S.A.R., Region 8 teams and departments with their own talk groups along with the S.E.R.P. plan will be using M.A.R.C.S. as their primary channel during an incident.

17. All Departments should follow the same numbering system within the county. Most are using their station number with each vehicle numbered after that. This is the best for M.F.C... (200 station number with vehicles 201-202-203 etc.) (for example " Engine 201 responding" "Squad 209 on scene") Departments are grandfathered in to whatever they are using now until new equipment is put in service.

18. Departments should not respond to the scene of an incident that they are told that is not safe. M.F.C. should relay all the information about the incident to the departments. The emergency responders need to know what is happening at the scene as well as the deputies.

M.F.C. will assign a staging area that is close to the incident but not jeopardizing anyone. If this staging area is not suitable to you contact M.F.C. and give them the new staging area. If you are ahead of the Law Enforcement there is no need to run Emergency and then park and wait. The 4 minute time frame will still be used for a response with these types of incidents. There is no need for emergency response to get there and wait for Law Enforcement. M.F.C. will advise when it is safe to go in or to return to you station.

19. All Fax machines need to be made available to all members so they can get their times and the other needed information from them.

20. If you are going to be out of service for any reason you need to call M.F.C. 740-452-3637 ext 6148 and advise them of this. M.F.C. does not need to know when a piece of equipment is on any type special detail unless they will need mutual aid sent at the time of call. If they are on a special detail and have a crew that can respond when the tones are set they do not need mutual aid sent. (Parades, festivals, fire school, fair grounds, mock drills etc.) If a piece of equipment is going on a call in another county and you will or may need mutual aid advise M.F.C. over the radio. 98 should not be used for these type events.

21. Always wait for a response from M.F.C. before giving your message.

22. Z.F.D. has a contract for All Schools and County Buildings. The O.I.C. should cancel Z.F.D. as soon as possible if they are not needed.

23. Radio checks should be kept to a minimum and should not be done when any other department is on a run.

EMERGENCY ALERTS FIRE FIGHTER IN TROUBLE

Mayday, Mayday, Mayday (SEE GUIDELINES ON LAST PAGE) Firefighter in trouble\ lost\out of air

Officer in charge or Command Post owns the airway and directs rescue assignment of equipment and personnel this is to be announced on the Fire ground and Main Tower Frequencies.

EMERGENCY EVACUATION

There will be a Solid or Long Air Horn Blast along with announcing Evacuation of area or structure on the radio.

All personnel are to meet at the Command Post for accountability (PAR) and or follow the assignment given by the O.I.C. This again is to be announced on the fire ground and Main Tower Frequencies

Structure Fire with People trapped or inside

Dispatch will send the next closes Engine Company and Zanesville Fire Department unless otherwise requested by the main department, along with the initial assignment as a R.I.C. team on initial dispatch

The O.I.C. should cancel departments not needed as soon as possible

Emergency traffic

Individual \ officer\ unit calling for emergency traffic all units yield all communications traffic so this person can transmit without interruption. This individual will advise when to clear the emergency traffic.

This is to be done on Main Dispatch Channel

PAR

This is for the personal accountability reporting system that should be called every 20 minutes by the safety officer when personnel are operating in the (I.D.L.H.) immediate dangerous to life and health area.

This is to be done on the frequency you are using.

If requested by the OIC MFC will call for PAR every _____minute

COMMON LANGUAGE SUGGESTIONS:

Working Fire or Extrication

The First unit on the scene to report size up of situation to dispatch. Dispatch is to repeat this size up. Working fire or extrication defines to the dispatch and incoming units that multiple tactics and goal must be accomplished to stabilize the incident.

Situation Contained

No additional equipment (other than what is responding or on the scene) is needed to handle the incident. The situation is stable or under control with equipment assigned to the incident. If you do not need the incoming equipment let M.F.C. know and they will cancel it. MFC should repeat the message for all incoming units to hear.

R.I.C. Team

This is a Rapid Intervention Crew. This crew may be assigned to assemble tools-SCBA-Ropes-Thermal Camera-Ladder Saws and stand by near the CP to be deployed in the event of a MAYDAY call or rescue should be needed on the emergency scene

Service Run

This is a request for the Fire or E.M.S. services of the department to assist or handle a non-emergency situation, on a temporary basis. (Wires down, C/O alarm no illness, assist elderly, fuel spill, illegal burn and other minor problems)

Automatic Response A/R

Is where two or more departments have agreed on a specific area these departments will be dispatched on all structure fires.

Dual Response

Is when two or more departments have agreed on a specific area or structure that they will be automatically dispatched to on the initial dispatch from M.C.F, to respond.

Mutual Aid

Is when a specific unit or officer is requesting additional units or equipment to be dispatched due to the nature of the incident or the inability to have adequate resources available to handle the incident? The O.I.C. should mark M.F.C. and specify what they want as mutual aid. The O.I.C. should cancel mutual aid as soon as it is not needed.

DOA

Victim or patient is deceased

**Incident
Command**

Incident Command is the process of setting up a command person or point for an incident. After it is set the commander is referred to as Command (Dresden road Command) not incident command.

Terminology

Dispatch (Attention Newton Twp. respond to a house, car, shed, garage, and grass fire or auto accident at _____)
Use unit number (Engine Tanker 1520) responding to _____ Unit # ___ en-route to (station, hospital
Etc)

On Scene with initial size up- M.F.C. will repeat this info for incoming units. ONLY PERTINENT
information should be given. (Working fire, 2 car with working extrication, nothing showing)

Request mutual aid from _____ with a (squad, tanker, engine, manpower)

Message received: unit or piece of equipment acknowledged transmission of information or message

These guidelines are an attempt to establish professional guidelines and provide excellent service to our
customers.

Muskingum County Firefighters Association

Mayday Operations Guidelines

January 2018

Definitions:

- **Emergency Traffic:** is broadcasted by *any personnel* at an incident for the express purpose of notifying all operational personnel and the Communications Center when an immediate threat or severe potential hazard exist that warrants immediate notification and corrective actions.
- **MAYDAY:** is broadcasted by *any personnel* at an incident for the express purpose of notifying all operational personnel and the Communications Center when a situation exists where by a member is in immediate need of assistance to escape a hazardous environment to which they may or may not be able to immediately extricate themselves to a safe environment or in recognition of a firefighter that is unaccounted for.
- **Situational Awareness:** The United States Coast Guard says that, "Situational Awareness is the ability to identify, process, and comprehend the critical elements of information about what is happening to the team with regards to the mission." In other words, if you have Situational Awareness you constantly know what is happening around you, and where you are in relation to threats.

Purpose:

- The purpose of this guideline is to provide a uniform procedure for Mayday situations and provide basic guidelines for firefighters to follow if they become lost or trapped.
- The rescue of trapped or lost fire fighters in a burning building is especially time sensitive. There is a narrow window of survivability for a fire fighter who is quickly depleting their air supply from their Self Contained Breathing Apparatus (SCBA) or trapped by approaching fire. Individual fire fighters must not delay reporting to Command if they become lost, trapped or in need of assistance. Fire Officers must also not delay the reporting of lost fire fighters or inability to complete accountability reports. Incident Commanders and Fire Officers must always assume that the missing fire fighter is lost in the building until the fire fighter can be accounted for. Command must also restructure the strategy and action plan to include a high priority rescue effort.
- Notify dispatch and activate Mayday dispatch assignment immediately.

Emergency Traffic Procedure:

- “Emergency Traffic” shall be used to warn or notify companies operating at the incident of an impending or existing severe hazard that would either jeopardize the safety of any member operating at the incident or have a significant impact on the mode of operations. If emergency traffic warrants evacuation of the building then a blast of the apparatus air horn shall be blown for 20-30 seconds.
- The Incident Commander shall acknowledge the receipt of the emergency traffic and assign companies as needed to support or mitigate the emergency.
- Declaring Emergency Traffic Procedures via radio:
 - “State Unit, Emergency Traffic, State Unit, Emergency Traffic”
 - State and repeat the Emergency
 - State any actions or resources needed to manage the emergency.
- Example: “Engine 2 Emergency Traffic, Engine 2 Emergency Traffic, large collapse on the “Charlie” side, repeat large collapse on the “Charlie” side, evacuate the building.

Mayday Procedure:

- “MAYDAY” should be declared when a member becomes:
 - lost, trapped, a low-air alarm is activated without an exit point, missing, disoriented, has lost contact with the hose/life-line/crew in zero visibility, or caught in a hostile fire event to the level that assistance will be needed in order to evacuate the hazardous environment.
- Procedure for declaring the MAYDAY:
 - Announce the MAYDAY three times followed by your urgent situation: “MAYDAY....MAYDAY....MAYDAY”(Include LUNARS)
 - L – Location (i.e. Second floor, Alpha, Bravo corner)
 - N – Name (i.e. FF Jones)
 - S – Situation / Problem (i.e. Low on air)
 - Activate the PASS device.
 - If possible attempt to self-extricate or find a tenable area of refuge.
 - Keep the Incident Commander informed of pertinent information.
 - Conserve your air
 - Communicate changes via radio in:
 - Air supply
 - Location
 - Fire Conditions
 - If you are able; turn PASS off to communicate any of these changes

- Accountability
 - Personnel Accountability Report (PAR) shall occur following a MAYDAY
 - Account for the rest of the crew with the member calling the MAYDAY
 - Account for all other crews working in the IDLH atmosphere
 - Make sure to account for the RIT

- Command Procedures for Mayday
 - Keep communications on current fireground channel. Only change when directed to by command. Keep communications for emergency traffic only.
 - Command, RIT and the FF calling the MAYDAY have priority radio use.
 - Do not abandon firefighting efforts
 - Provide ventilation and lighting
 - Buy as much time for RIT and the FF calling the MAYDAY
 - Activate RIT in a MAYDAY
 - Assign another RIT once the initial RIT has been deployed
 - If possible, utilize FD60DISP to communicate with Muskingum Fire to keep the dispatch channel clear for dispatching additional resources.
 - Request 2 additional Engines, one engine from ZFD and next engine on run card. One squad from Community.
 - Cease primary search activities
 - Re-allocate these resources
 - Coordinate between crews
 - Assign a OIC to the RIT
 - Assign a Safety Officer – Over all safety and track PARS
 - Obtain updates from:
 - RIT
 - Fire Attack
 - These reports shall include reports on:
 - Fire Conditions
 - Structural Conditions
 - Air Supply
 - This is the responsibility of all on the fireground
 - Once FF is rescued and outside call for a PAR
 - Regroup and consider a change in strategy
 - A Mayday situation requires strong leadership to coordinate search activities and to deal with a very emotional situation. Limit free-lancing, and restrict rescue personnel to only the number needed
 - The abandonment of rescue efforts will be a difficult decision, and will most likely be highly contested by personnel on the scene. However, if survival of the downed firefighter is no longer likely, and fire / structural conditions significantly increase the risk of additional firefighter fatalities, interior personnel should be withdrawn.

Training:

- Training shall be completed by each city and county firefighter and city and county 911 dispatchers. Training shall be the responsibility of each department.
- Firefighters shall be checked off utilizing the Mayday Skill Sheet. The following scenarios will be used at random for the skill check off.
 - Air Emergencies
 - Lost/Disoriented
 - Entanglement
 - Thermal Emergencies
 - Collapse/Trapped
- All fire department personnel and dispatchers shall read and be familiar with this guideline.
- When training is completed submit a list to the Muskingum County Firefighters Association that the training and skills have been completed and signed off.
